

VERITAS™

Ready. Set. Protect.

Veritas NetBackup™ has been the gold standard in data protection for nearly three decades. As a market share leader in backup and recovery, it can support any landscape.

CHOOSE A USE CASE TO LEARN HOW
NetBackup CAN HELP YOU REACH YOUR GOALS

Prepare for the Future

"I can't protect new technologies with my current solution."

"I have difficulties migrating data to and between clouds."

"I need public or hybrid cloud support."

If you or someone on your team has ever said or thought statements like these, this would be a great use case for you to explore.

● DIVE IN

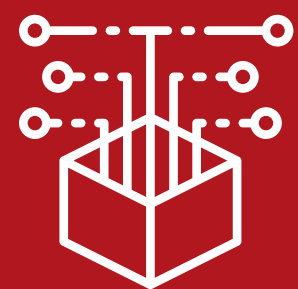

Thirty years of innovation. Not a moment too soon.

Standing ready for the future is easier said than done. Luckily, NetBackup is the product of continuous innovation through every technology shift of the past decades. That's a lot of experience that puts you in a position to seize opportunity and outpace the competition.

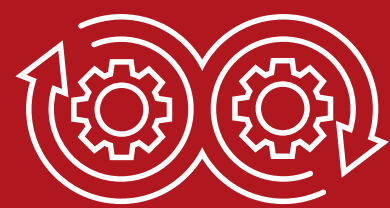

Set trends. Don't follow them.

Manage Business Risk

"I'm not prepared to quickly respond to ransomware or other malicious attacks."

"I'm not confident my organization is fully compliant with industry regulations."

"We need more reliable security."

If you or someone on your team has ever expressed thoughts like these, this would be a valuable use case to explore.

EXPLORE THE USE CASE

Take on the threat of ransomware with confidence.

NetBackup helps ensure rapid recovery from catastrophic events, be it lost files, data center down or ransomware attacks. From backup appliances to cloud storage, NetBackup integrates at every point in the technology stack to support certain, strategic recovery from disaster.

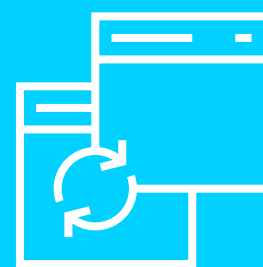

Zero downtime. Zero sleep lost.

Security

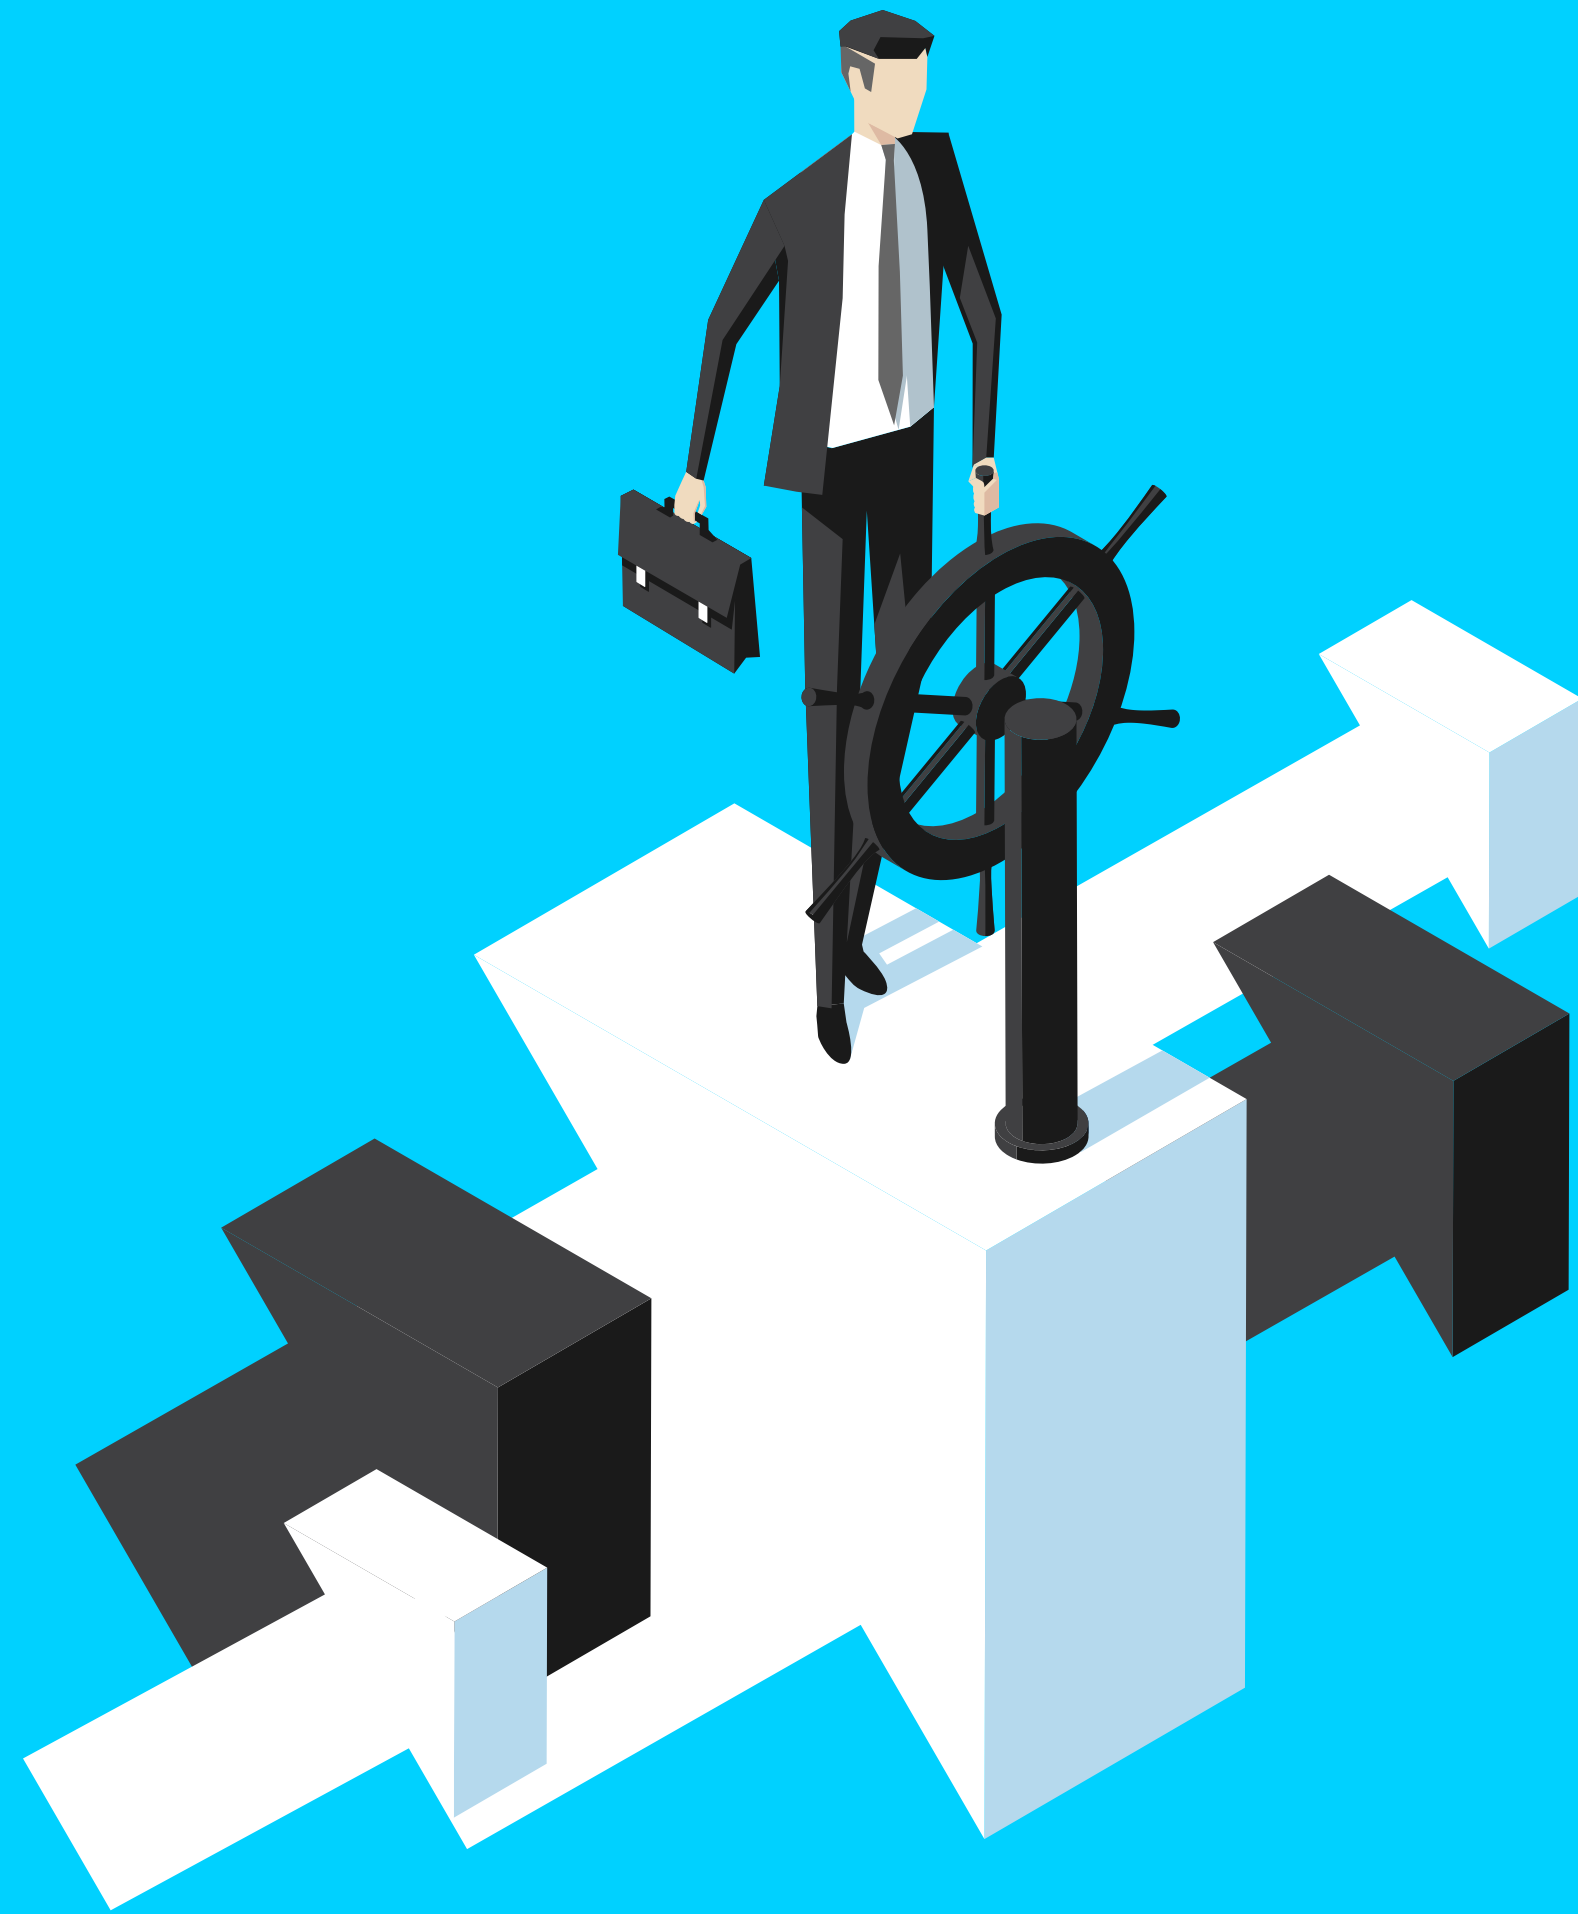

Leverage hardened NetBackup Appliances based on NIST Guidelines and Security Technical Implementation.

Meet compliance regulations.

Help ensure compliance with separation of duties, long-term retention and multi-tenancy capabilities. Veritas also offers backup compliance tools with reporting on how backup resources are performing against your SLAs and provides deep visibility, targeted analysis and informed action on data to identify things like PII.

No data loss. A whole lot to gain.

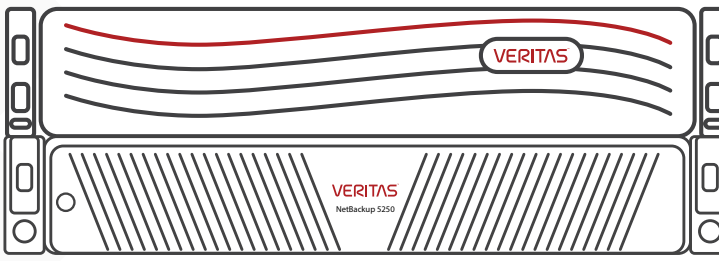

With NetBackup software's data replication to off-premises or cloud, your data is always available when you need it. And it's encrypted in-flight and at rest.

Managing business risk starts here.

MORE ABOUT THE NETBACKUP APPLIANCE FAMILY

Lower Cost & Complexity

"I need to lower TCO."

"The costs of deploying, maintaining and upgrading architectures are unpredictable."

"We've deployed point products everywhere, so it's difficult to manage, control and report on decentralized components."

If you or someone on your team has ever said or thought statements like these, this would be a great use case for you to explore.

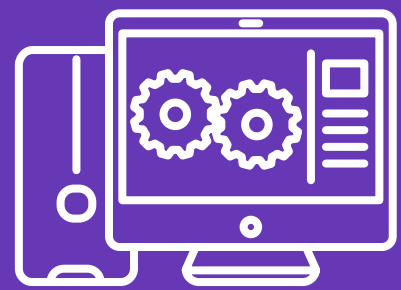

EXPLORE THE USE CASE

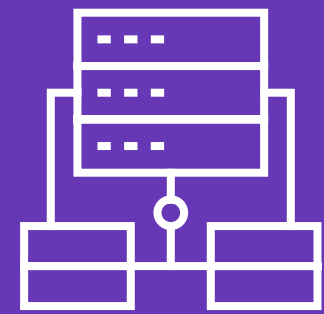

NetBackup can lower TCO by 40%.

Featuring high performance, intelligent automation and centralized management, NetBackup is a unified data protection platform that protects any workload at scale, eliminating the need for disjointed point products. It's a single solution to protect all your data assets that supports virtually every popular server, storage, hypervisor, database, application and cloud platform used in the enterprise today.

Go Virtual

"I need to protect hundreds of thousands of VMs with incremental backups and consistent performance."

"I want to instantly access VMware file data on any file system without an agent."

"I want to automate VM protection with set-and-forget intelligent policies."

If you or someone on your team has ever said or thought statements like these, this would be a great use case for you to explore.

EXPLORE THE USE CASE

Designed with VMware, for VMware.

NetBackup integrates with leading hypervisors to provide scalable protection and granular recovery for all your virtual environments. Back up without agents at the image level and get granular restores at the VM, file, folder and VMDK level.

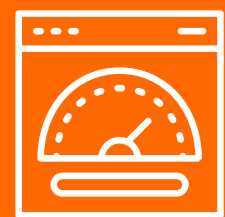

Whether you're managing hundreds of VMs or hundreds of thousands, you'll get protection that scales as your environment grows, with instant access to your VMs and all the control you need without the complexity.

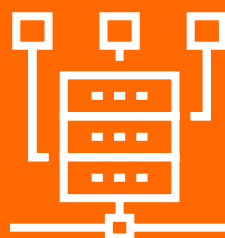

Go virtual with NetBackup and get:

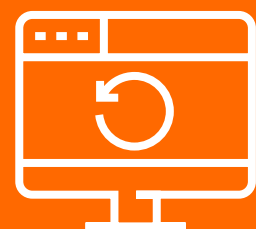

Automated, intelligent policies that automatically discover, classify and protect any VM

Accelerated performance up to 100x with incremental forever backups

Instant recovery for multiple VMs from backup storage when time matters

Convenient, self-service backup and restores for VM admins via a modern user interface

Protection and recovery for VMware Cloud Foundation and Nutanix Enterprise Cloud

Get used to overdelivering.

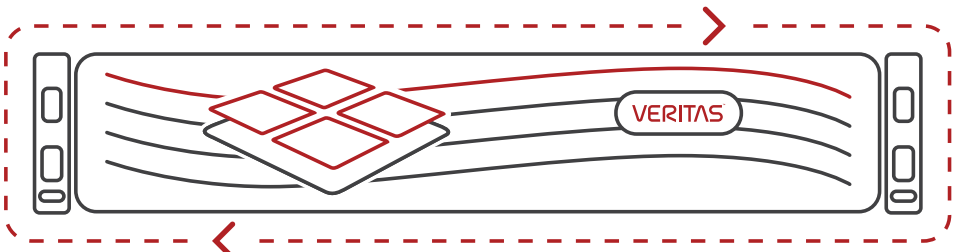

- › Automate VM protection with set-and-forget intelligent policies
- › Get granular recovery for VM data, from individual files and folders to VMs and VMDKs
- › Protect over hundreds of thousands of VMs with incremental backups and consistent performance
- › Manage your way with the choice of a simple, self-service user interface or VMware vCenter and vRealize plugins
- › Protect VMware vSphere, vSAN, VVOLs and VMware Cloud on AWS with a single solution
- › Instantly access VMware file data on any file system without an agent

Go virtual
the easy way.
